

(a) Goal completion by family (three densities)

head on corridor	0/3	0/3
doorway bottleneck	0/3	0/3
crossing flow	3/3	3/3
blind corner	0/3	0/3
group blocking	0/3	3/3
overtaking	0/3	0/3
opposite streams	0/3	0/3
temporary blockage	2/3	2/3

cells: goals / n; darker = higher rate

DWB PGRR

(b) Completion and collision endpoints by density

Wilson 95% CI; n=8/point

Endpoints shown separately; rates need not sum to 100%.
